Eurobloc smooth wall covering is a product born out of the wish to offer new aesthetical possibilities in the facing of low walls, fencing, terraces etc... The smooth finish is not only pleasant to the eye but it can meet the most various architectonical requirements thanks to the wide range of colors available. Given its reduced thickness, this finish looks also more elegant and is highly appreciated because of its easier cleaning. The range of smooth wall facings is completed by a series of special elements.
